Summary

Senior backend engineer with 5+ years on EZO's multi-tenant IT asset management SaaS in Ruby on Rails and MySQL, promoted three times, and has led teams of up to 8. Cut a sync over millions of records from 12–15 hours to under an hour by profiling it, fixing N+1 queries and batching writes.

Technical Skills

Backend: Ruby, Ruby on Rails, ActiveRecord, MySQL, REST APIs, background jobs (delayed_job), multi-tenant SaaS
Practices: system design, performance tuning, production debugging, code review, mentoring, RFCs
Testing & Quality: RSpec, Minitest, CI (GitHub Actions, git hooks), Brakeman, Bullet
Infrastructure & Observability: AWS (S3, SNS, SQS, Marketplace APIs), Docker, Elasticsearch, Datadog, Airbrake
Frontend & Tools: React, TypeScript, Redux Toolkit, JavaScript; Git, Claude Code, Cursor, Go (CLI tooling)

Experience

EZO (7Vals) Lahore, Pakistan
AssetSonar and EZOfficeInventory: IT asset management SaaS *Aug 2021 – Present*
Principal Software Engineer *Jul 2026 – Present*

- Run our workflow automation program, mentor junior engineers and join customer calls on escalated issues
- Have reviewed pull requests from 40+ engineers and interviewed about 100 candidates since 2022
- Fixed slow automation pages: 40 test automations went from 98,203 queries to 2,060
- Shipped provisioning rules so customers set which devices are authorized and hold the rest out of the MDM sync
- Wrote test suites for all 14 MDM and device syncs (11 merged) and fixed production bugs found along the way

Senior Software Engineer *Jul 2024 – Jul 2026*

- Led about 8 engineers replacing single-trigger automation rules with a node-based workflow engine, now running millions of executions a day across three products. Built its HTTP node, webhook triggers and branching myself
- Finding which vendor contract covered a server's software took a chain of lookups. Led 5 engineers building a CMDB graph that answers it in one traversal, live in about 7 months. I wrote its design RFCs and backend
- Took software asset management from usage metering to a product for utilization and Shadow IT tracking
- Delivered the CDW procurement integration and led a 2-engineer AWS cloud integration
- Introduced our RFC process, Cursor rules and skills, git-hook CI and a RAG bot for Customer Success

Software Engineer (L2) *Jan 2023 – Jul 2024*

- Built our service catalog, including the part that runs inside customers' Zendesk Help Centers
- Devices with invalid BIOS serials kept showing up as duplicate assets. Wrote matching that falls back to the MAC address, and customer reports of duplicates dropped sharply
- Extended the audit trail to every action on an IT asset, which five enterprise customers had asked for
- Put AssetSonar on AWS Marketplace, building the sign-up on SNS events and the Entitlement and Metering APIs

Software Engineer *Aug 2021 – Jan 2023*

- Cut a device sync from 12–15 hours to under an hour with Datadog profiling, N+1 fixes and batching
- Wrote the audit-trail engine, closing a customer request that had been open since 2019
- Fixed SQL and command injection issues that Brakeman flagged during SOC 2 work

Open Source

rmine | *Go*: Redmine CLI and Claude Code skill for developers and coding agents, used by our team at EZO
bitwise_attributes | *Ruby*: gem that packs boolean flags into one integer column, tested on Rails 6.1 to 7.2
stafflow | *Rails*: multi-tenant HR app our team built in 2021. I maintain it and moved it to Rails 7.2 and Ruby 3.3

Education, Certification and Awards

National University of Computer and Emerging Sciences (FAST-NUCES) Lahore, Pakistan
BS Computer Science; 4.0 SGPA in final two semesters; Gold Medal, Rector's and Dean's Lists *2017 – 2021*
AWS Certified AI Practitioner (AIF-C01), 2026
EZO: Model Software Engineer 2026, Precision Engineer 2024, Beautiful Code Writer 2023 & 2025, Rising Star 2022
