SUMMARY

Senior backend engineer with 5+ years on EZO's multi-tenant IT asset management SaaS in Ruby on Rails and MySQL: integrations, data sync at scale, a workflow engine and a CMDB graph. Promoted three times; has led teams of up to 8.

TECHNICAL SKILLS

Backend: Ruby, Ruby on Rails, ActiveRecord, MySQL, REST APIs, background jobs (delayed_job), multi-tenant SaaS
Testing & Quality: RSpec, Minitest, CI (GitHub Actions, git hooks), Brakeman, Bullet
Infrastructure & Observability: AWS (S3, SNS, SQS, Marketplace APIs), Docker, Elasticsearch, Datadog, Airbrake
Frontend & Tools: React, TypeScript, Redux Toolkit, JavaScript; Git, Claude Code, Cursor, Go (CLI tooling)

EXPERIENCE

7Vals (EZO)

Lahore, Pakistan

AssetSonar and EZOfficeInventory: IT asset management SaaS

Aug 2021 – Present

Principal Software Engineer

Jul 2026 – Present

- Run the Workflow Automation program; review code across 40+ engineers, mentor juniors, interview candidates most months since 2022 (including the final round for our Lead ML Engineer) and resolve issues on customer calls
- Built IT asset provisioning rules that keep unauthorized devices out of the MDM sync
- Leading automated test coverage for all 13 MDM device-sync integrations (Intune, Jamf Pro, Kandji and more)
- Introduced shared Cursor rules, Claude Code skills and git-hook CI; built a RAG assistant for Customer Success

Senior Software Engineer

Jul 2024 – Jul 2026

- Led about 8 engineers replacing a one-step rules engine with a node-based workflow engine; personally built its HTTP request node, webhook triggers, success/failure branching, execution logs and encrypted credential vault
- Led a 5-engineer team from architecture to production in about 7 months on a CMDB / IT relationship graph with n-level traversal; introduced the team's RFC process, wrote its design RFCs and built the new module's backend
- Took Software Asset Management from usage-metering infrastructure to a customer-facing product (utilization, Shadow IT detection, KPI widgets); 3 of its 4 phases shipped as flagship releases with sales demos
- Delivered the CDW procurement integration (a flagship release) and led a 2-engineer AWS cloud integration

Software Engineer (L2)

Jan 2023 – Jul 2024

- Built the Service Catalog (ITSM) from scratch, with a front end embedded in Zendesk Help Centers
- Built the Device Uniqueness Engine, which stops duplicate assets from invalid BIOS serials via a MAC fallback
- Extended the audit trail to every action on an IT asset, a flagship release requested by five enterprise customers
- Helped the PM refine the Peripheral Device Discovery spec, then built and launched it as a flagship release
- Built the AWS Marketplace SaaS sign-up: SNS subscription events plus the Entitlement and Metering APIs

Software Engineer

Aug 2021 – Jan 2023

- Cut a device sync over millions of software records from 12–15 hours to under 1 hour (Datadog profiling, N+1 removal, batching); the pattern was reused in later MDM integrations
- Built the audit-trail engine from scratch, closing a customer request open since 2019
- Fixed SQL- and command-injection findings with Brakeman as part of SOC 2 remediation

OPEN SOURCE

rmine | *Go*: Redmine CLI built for developers and coding agents; 12 tagged releases, embedded Claude Code skill
bitwise_attributes | *Ruby*: gem packing boolean flags into one ActiveRecord column; CI across Rails 6.1–7.2
stafflow | *Rails*: multi-tenant HR SaaS (2021 team project) I now maintain; upgraded Rails 6.0→7.2, Ruby 2.7→3.3

EDUCATION AND AWARDS

National University of Computer and Emerging Sciences (FAST-NUCES)

Lahore, Pakistan

BS Computer Science; 4.0 SGPA in final two semesters; Gold Medal, Rector's and Dean's Lists

2017 – 2021

7Vals: Model Software Engineer 2026, Precision Engineer 2024, Beautiful Code Writer 2023 & 2025, Rising Star 2022
