SUMMARY

Senior backend engineer with 5+ years on EZO's multi-tenant IT asset management SaaS, in Ruby on Rails and MySQL. Most of my work is integrations, large data syncs, and the workflow and CMDB engines. Promoted three times.

TECHNICAL SKILLS

Backend: Ruby, Ruby on Rails, ActiveRecord, MySQL, REST APIs, background jobs (delayed_job), multi-tenant SaaS
Testing & Quality: RSpec, Minitest, CI (GitHub Actions, git hooks), Brakeman, Bullet
Infrastructure & Observability: AWS (S3, SNS, SQS, Marketplace APIs), Docker, Elasticsearch, Datadog, Airbrake
Frontend & Tools: React, TypeScript, Redux Toolkit, JavaScript; Git, Claude Code, Cursor, Go (CLI tooling)

EXPERIENCE

7Vals (EZO)

Lahore, Pakistan

AssetSonar and EZOfficeInventory: IT asset management SaaS

Aug 2021 – Present

Principal Software Engineer

Jul 2026 – Present

- Run the Workflow Automation program, mentor junior engineers and join customer calls on tricky issues
- Have reviewed pull requests from 40+ engineers since 2022, and interview candidates most months, including the final round for our Lead ML Engineer
- Built provisioning rules that keep unauthorized devices out of the MDM sync
- Leading test coverage for all 13 MDM device syncs (Intune, Jamf Pro, Kandji and others)
- Set up the team's Cursor rules, Claude Code skills and git-hook CI, and a RAG bot for Customer Success

Senior Software Engineer

Jul 2024 – Jul 2026

- Led about 8 engineers replacing a one-step rules engine with a node-based workflow engine. I wrote the HTTP request node, webhook triggers, branching and run logs, plus encrypted storage for integration credentials
- Led 5 engineers taking a CMDB relationship graph from design to production in about 7 months. I wrote its design RFCs, which started the team's RFC process, and built the new module's backend
- Took Software Asset Management from usage metering to a product for utilization and Shadow IT tracking
- Delivered the CDW procurement integration and led a 2-engineer AWS cloud integration

Software Engineer (L2)

Jan 2023 – Jul 2024

- Built the Service Catalog, including the part that runs inside customers' Zendesk Help Centers
- Wrote the Device Uniqueness Engine so devices with invalid BIOS serials no longer create duplicate assets
- Extended the audit trail to every action on an IT asset, which five enterprise customers had asked for
- Helped the PM tighten the Peripheral Device Discovery spec, then built and launched it
- Built the AWS Marketplace sign-up on SNS events and the Entitlement and Metering APIs

Software Engineer

Aug 2021 – Jan 2023

- Cut a device sync over millions of software records from 12–15 hours to under an hour with Datadog profiling, N+1 fixes and batching. Later MDM integrations reused the approach
- Wrote the audit-trail engine, closing a customer request that had been open since 2019
- Fixed SQL and command injection issues that Brakeman flagged during SOC 2 work

OPEN SOURCE

rmine | *Go*: Redmine CLI for developers and coding agents, with 12 releases and a bundled Claude Code skill
bitwise_attributes | *Ruby*: gem that packs boolean flags into one integer column, tested on Rails 6.1 to 7.2
stafflow | *Rails*: multi-tenant HR app our team built in 2021. I maintain it and moved it to Rails 7.2 and Ruby 3.3

EDUCATION AND AWARDS

National University of Computer and Emerging Sciences (FAST-NUCES)

Lahore, Pakistan

BS Computer Science; 4.0 SGPA in final two semesters; Gold Medal, Rector's and Dean's Lists

2017 – 2021

7Vals: Model Software Engineer 2026, Precision Engineer 2024, Beautiful Code Writer 2023 & 2025, Rising Star 2022
