Mehboob Ali

Senior Full-Stack Engineer · Ruby on Rails, React, TypeScript

Lahore, Pakistan (open to remote) | mehboob.swe@gmail.com
mehboob.dev | linkedin.com/in/mehboobali98 | github.com/mehboobali98

Summary

Full-stack engineer with a backend focus and 5+ years on EZO's IT asset management SaaS, using Rails and MySQL with React and TypeScript. I built our server rack layout editor on my own and the catalog that runs inside customers' Zendesk Help Centers. Promoted three times.

Technical Skills

Backend: Ruby, Ruby on Rails, ActiveRecord, MySQL, REST APIs, background jobs (delayed_job), multi-tenant SaaS
Frontend: React 18, TypeScript, Redux Toolkit, React Router, React Flow, MUI, styled-components, ERB, jQuery
Testing & Quality: RSpec, Minitest, frontend unit tests, CI (GitHub Actions, git hooks), Brakeman, Bullet
Infrastructure & Tools: AWS (S3, SNS, SQS), Docker, Elasticsearch, Datadog, Airbrake, Claude Code, Cursor

Experience

EZO (7Vals) Lahore, Pakistan
AssetSonar and EZOfficeInventory: IT asset management SaaS *Aug 2021 – Present*
Principal Software Engineer *Jul 2026 – Present*

- Run our workflow automation program, mentor junior engineers and join customer calls on escalated issues
- Have reviewed pull requests from 40+ engineers and interviewed about 100 candidates since 2022
- Shipped a server rack layout editor I built on my own from the Figma design. Devices drag from a palette onto a React Flow rack as faceplates, and layouts save through a Rails API I also wrote
- Built data-quality checks that flag duplicate assets and invalid serials, across Rails and React
- Extended the CDW procurement integration to multiple tenants and to Canada, across Rails and React

Senior Software Engineer *Jul 2024 – Jul 2026*

- Led about 8 engineers replacing single-trigger automation rules with a node-based workflow engine that runs millions of executions a day. Built its HTTP node, webhook triggers, branching and some of its React screens
- Led 5 engineers taking a CMDB relationship graph to production in about 7 months. I wrote its design RFCs, built the backend and worked on the React Flow graph view
- Built the software asset management dashboards in React, including Shadow IT utilization and usage KPIs
- Delivered the CDW procurement integration and led a 2-engineer AWS cloud integration
- Introduced our Cursor rules and skills plus git-hook CI, and built a RAG bot for Customer Success

Software Engineer (L2) *Jan 2023 – Jul 2024*

- Built our service catalog, including a plain JavaScript library that runs inside customers' Zendesk Help Centers, in English and French, bundled with Rollup and served from S3
- Devices with invalid BIOS serials kept showing up as duplicate assets. Wrote matching that falls back to the MAC address, and customer reports of duplicates dropped sharply
- Put AssetSonar on AWS Marketplace, building the sign-up on SNS events and the Entitlement and Metering APIs

Software Engineer *Aug 2021 – Jan 2023*

- Cut a sync over millions of records from 12–15 hours to under an hour with profiling, N+1 fixes and batching
- Wrote the audit-trail engine, closing a customer request that had been open since 2019
- Built report screens in Rails views, jQuery and CSS, and fixed SQL injection issues that Brakeman flagged

Open Source

rmine | *Go*: Redmine CLI and Claude Code skill for developers and coding agents, used by our team at EZO
mehboob.dev | *Astro, TypeScript*: my portfolio and technical writing
bitwise_attributes | *Ruby*: gem that packs boolean flags into one integer column, tested on Rails 6.1 to 7.2

Education, Certification and Awards

National University of Computer and Emerging Sciences (FAST-NUCES) Lahore, Pakistan
BS Computer Science; 4.0 SGPA in final two semesters; Gold Medal, Rector's and Dean's Lists *2017 – 2021*
AWS Certified AI Practitioner (AIF-C01), 2026
EZO: Model Software Engineer 2026, Precision Engineer 2024, Beautiful Code Writer 2023 & 2025, Rising Star 2022
